

ENVIRONMENTAL POLICY

09.08.2024

As the management and employees of Akten Kozmetik, with our brand and private label productions, we are aware of our respect and responsibility towards the environment and natural life. We aim to minimize the environmental impacts that may arise from our activities by prioritizing environmental protection and sustainability, to use our natural resources efficiently, to prevent environmental pollution by reducing waste at its source, and to protect the ecological balance and natural resources. In this direction, we adopt the following principles.

We are committed to keeping all potential environmental hazards under control within the scope of all our activities for a sustainable environment by conducting environmental aspect and risk assessments. We also commit to continuously improving our environmental performance by ensuring the provision of resources that will minimize environmental impacts and by complying with changes in legislation and the Environmental Management System.

- ❖ We implement our efforts to combat climate change, protect water and marine resources, preserve biodiversity and ecosystems, and prevent environmental pollution in accordance with the requirements of national and international environmental legislation.
- ❖ We aim to improve our practices within the Environmental Management System in line with relevant stakeholder requirements of the standards, as well as the expectations of our stakeholders and business partners.
- ❖ We aim to reduce the variety and amount of waste generated from our processes and activities by separating all types of waste at the source through Zero Waste management.
- ❖ With the awareness that not all waste is garbage, we aim to contribute to the circular economy by delivering recyclable and recoverable waste to licensed recovery companies under the terms of contractual agreements.
- ❖ We aim to take reduction measures by monitoring the consumption of electricity, water, and fuel in the use of natural resources.
- ❖ Through the use of clean production technologies in our processes, we aim to use natural resources efficiently by reducing energy and water consumption. As part of our efforts to combat climate change, we also aim to minimize carbon and greenhouse gas emissions by utilizing sustainable and environmentally friendly resources and technologies in our operations.
- ❖ We adopt a production process that is compatible with nature and the environment, aiming to prioritize environmental sensitivity in our product ingredients and packaging.
